

Managed Endpoint Protection Service

Feeling secure conducting business online today?

Let's face it, just running some basic security software might seem enough. But is it? What if your computer crashes, gets stolen, or falls victim to ransomware, locking you out of precious data?

Here's the reality:

Securing your Windows device requires more than a simple checklist. There is no software magic bullet, and your initial setup simply establishes a security baseline.

Don't be fooled by a checklist – securing your Windows device goes deeper:

Antivirus isn't enough! Setting up your device securely is just the first step. While security software protects your system, backups safeguard your data. Together, they form a powerful shield for your device and information.

Buying security software and a cloud backup service isn't a magic solution:

These tools are there to assist you, but they're not failproof. They provide licenses to use the software, not constant management. The software company won't automatically fix problems or contact you if something goes wrong. The worst part? You might only discover the service failed when it's too late – after a security breach comprises your data or through a hardware failure or theft.

One click on the wrong link could mean disaster!

Malware and ransomware can lock you out of your device and steal your precious data. Imagine losing weeks or months of work due to a cyberattack. A Managed Endpoint Protection service is your shield against these threats. It gives you the peace of mind to focus on what matters, knowing you're prepared for the unexpected.

SIGN UP

The Core Elements Managed Endpoint Protection Service offers:

Top-Rated Endpoint Security

Once our security program is installed, it protects you against all kinds of malware (such as viruses, spyware, trojans), ransomware attacks, phishing, and data theft.

24/7 Automated Backup

An easy, automated online 24x7 backup system that keeps a secure copy of your local data within a separate secured environment. All data changes and additions are constantly processed throughout the day, regardless of time or location.

Management & Support

Core Elements support analysts takes care of the following:

- Installing and configuring the endpoint security software and backup service
- Monitoring the device for suspicious activity
- Analyzing security alerts and responding to threats
- Keeping the software current with the latest application and security updates
- Providing ongoing security expertise and guidance

Still on the fence about it? We get it. That's why your first 30 days of Managed Endpoint Protection service are risk-free. If you feel like you're not 100% satisfied, you're free to change your mind and request a full refund. We'll process your request ASAP, and you'll get your money back in no time.
